# Distributed Biological Observatory

An Arctic Data Archive Linking Physics & Biology

**NEW!** [Submit Data](#)       

Long Term DBO Data Archive

## Welcome to the Distributed Biological Observatory Data Archive

The data archive for the Distributed Biological Observatory (DBO) is envisioned as a change detection array along a latitudinal gradient extending from the northern Bering Sea to the Barrow Arc. DBO sampling is focused on transects centered on locations of high productivity, biodiversity and rates of biological change. The DBO sampling framework was initially tested during the successful 2010 Pilot Study, which consisted of international ship occupations of two of the DBO sites, one in the SE Chukchi Sea and one across upper Barrow Canyon. The DBO is specifically included in the draft US National Ocean Policy Strategic Plan. In addition, the Marine Working Group of the International Arctic Science Committee (IASC) has endorsed the DBO and is supporting similar activities in the Atlantic sector of the Arctic. The U.S. Interagency Arctic Research Policy Committee (IARPC), comprised of representatives from 13 Federal agencies, developed a five year plan (2013-2017) focused on seven research themes, with further development of the DBO included under the first theme: Sea ice and Marine Ecosystems.

The DBO IT is now focused on bringing together data from 2010-2013 sampling efforts, to demonstrate the value-added of this national and international, sampling shared-data approach to the investigation of biological responses to a rapidly changing Arctic marine ecosystem. Expanding from the Pacific Arctic sector, the DBO will also serve as a framework for international research coordination via the Arctic Council Circumpolar Biodiversity Monitoring Program (CBMP), and is recognized as a task of the pan-arctic Sustaining Arctic Observing Network (SAON) program.

# Distributed Biological Observatory

An Arctic Data Archive Linking Physics & Biology

**NEW!** [Submit Data](#)       

[Long Term DBO Data Archive](#)

## Data Submission Procedures

The NCAR/Earth Observing Laboratory is prepared to accept your data sets and documentation for the Distributed Biological Observatory project.

### Data Submission Instructions

Data sets can be submitted using the MetaArch submission tool. To access the MetaArch submission tool, [click here](#).

If you are uncertain as to your login information for MetaArch or if you do not have a login, please contact us at [metaarch@eol.ucar.edu](mailto:metaarch@eol.ucar.edu).

A data set is a collection of related data and documentation files. For example, underway seawater sampling data collected aboard a cruise as compiled into one or more data files with the appropriate documentation would be considered a data set.

To submit a data set to the archive, fill out the "Create a Data Set" form for the DBO project. To log into MetaArch and immediately begin filling out this form, [click here](#).

Once your data set has been created, you can add files to the data set file list by clicking on the "Upload Files" link at the bottom of the data set display page, as shown below:

The screenshot shows the MetaArch web interface. The main page displays details for a dataset named "Another test dataset", including contact information, summary, and additional information. A modal window titled "Another test dataset - Upload Files" is open, showing a "Data Set File List" with two files: "Doc File: README.txt" and "Data File: CFL\_data\_submission.xls". Below the file list are "Add File" and "Remove empty/unused File(s)" buttons. A "Save Changes" button is highlighted with a red box. A blue box highlights the "Data / Documentation Files & Links" section, which shows the uploaded files: "Doc File: README.txt ([TXT], 1 kB)" and "Data File: CFL\_data\_submission.xls ([XLS], 168 kB)". A green arrow labeled "Navigates To" points from the "Save Changes" button to the "Data / Documentation Files & Links" section.

Funded by: NSF 1204082

### Summary

This dataset contains water nutrients, sediment, and infaunal biological data from the CCGS Sir Wilfred Laurier cruise between 07/06/2010 and 07/22/2010, as part of the Distributed Biological Observatory project. This dataset includes data from DBO transects 1, 2, 3, and 5.
